

IN THE CLAIMS

Please amend the claims to read as follows:

Listing of Claims

Claims 1-10 (Cancelled).

11. (Currently Amended) A transmitting method comprising:

receiving information which is transmitted from a base station apparatus and which relates to a number of transmission signals to be transmitted; and  
transmitting access signals, from a terminal apparatus, using a resource selected at random from resource candidates, wherein a number of the access signals matches the number of transmission signals to which the information relates, and the access signals are comprised of an access signal transmission signals, the number of which matches the information and comprising a transmission signal and at least one duplication of said access transmission signal, using a resource selected at random from resource candidates.

12. (Previously Presented) The transmitting method according to claim 11, wherein the resource candidates are a timing, transmission frequency, or spreading code.

13. (Currently Amended) A terminal transmitting apparatus comprising:

a receiving section that receives information which is transmitted from a base station apparatus and which relates to a number of transmission signals to be transmitted; and

a transmitting section that transmits access signals using a resource selected at random  
from resource candidates, wherein a number of the access signals matches the number of  
transmission signals to which the information relates, and the access signals are comprised of an  
access signal transmission signals, the number of which matches the information and comprising  
a transmission signal and at least one duplication of said access transmission signal, using a-  
resource selected at random from resource candidates.

Claim 14 (Cancelled).

15. (New) The transmitting method according to claim 11, wherein the access signals  
are transmitted using the resource in consecutive time slots.
